

POWERED BY KAPRUKA

How Expert Desk Works

Agency-quality digital marketing, delivered by real experts, at fixed prices — without the retainer, the wait, or the account-manager relay.

■ What this is

A productized marketing services storefront, owned and operated by Kapruka's Digital Marketing team. Think "Fiverr-style packages" — Basic / Standard / Premium, fixed scope, fixed price, fixed delivery time — but every service is fulfilled in-house by a vetted specialist, not an open marketplace of anonymous freelancers.

"Everything an agency promises. None of the wait, the markup, or the middlemen."

■ The problem this solves

Hiring a marketing agency is painful in three specific ways — for Sri Lankan SMEs who need real marketing work but can't justify (or don't trust) a traditional retainer.

PAIN	AGENCY REALITY	OUR ANSWER
Time	Weeks of onboarding calls before anything ships	Pick a package, brief it once, work starts the same week
Cost	A retainer from day one, whether you need 40 hours or 4	One fixed price per package — pay for the deliverable, not the overhead
Communication	Your brief passes through an account manager first	You talk straight to the expert doing your work, every time

■ How it works, at a glance

- 1 Customer tops up their token wallet and browses the service catalog.

- 2 They pick a service. What happens next depends on which of two types it is (see below).
- 3 A specialist — backed by an AI agent team where one exists (like Social Media Growth) — does the actual work.
- 4 Delivery lands in the customer's dashboard; they download it, same flow every time.

■ Two types of service

Every service on the catalog falls into exactly one of these two paths — never both.

① Requires a brand study

- SEO
- CRO
- Google Ads
- Meta Ads
- Social Media Growth
- GEO — AI Search

Scope depends on researching the business first — free study before any charge

② No brand study needed

- Video Creation
- Graphic Design
- Video Editing
- Motion Graphics
- AI Chatbot
- Website Development

Fixed-scope deliverable work — count/length sets the price, not research

■ What happens after a brand study request

For SEO, CRO, Google Ads, Meta Ads, Social Media Growth, and GEO.

1 Contact customer

Customer submits the free request; we reach out to confirm details and context.

2 Finalize

Scope of the study is confirmed — which platforms, what access (if any) was granted, what to focus on.

3

Conduct brand study

The research runs — full audit, findings, SWOT, prioritized fix checklist. Free, no charge yet.

4

Offer packages

3 tailored Basic/Standard/Premium options are sent, priced and scoped for this specific business.

5

Customer selects

They pick exactly one. Tokens are deducted at this moment — never before.

6

Delivers

Work begins against the picked package's scope and deadline.

■ What happens for non-brand-study services

For Video Creation, Graphic Design, Video Editing, Motion Graphics, AI Chatbot, and Website Development.

1

Customer picks a package & pays

No research step — scope is fixed by count/length, so the customer chooses Basic/Standard/Premium straight from the catalog and pays in tokens immediately.

2

We connect with the customer

Gather the actual requirements — whatever the specific deliverable needs. For video/design/motion work: brief, assets, references, brand materials. For the AI Chatbot: FAQs, pricing, and service info to train it on. **For Website Development specifically:** domain and hosting status (or whether we need to help set those up), page content and copy, design references, and any existing brand assets — this service needs more upfront detail than a typical instant-checkout deliverable, so this step matters more here than elsewhere.

3

Deliver

Work is produced and delivered by the package's deadline — same download-on-delivery flow as every other service.
